Researchers have few options for going after lionfish at depths beyond scuba divers' reach

Video: Lionfish have sharp, thin spines that can be venomous, yet researchers want more people to discover how good they taste.

By Associated Press, Updated: Tuesday, July 16, 7:41 AM

ABOARD THE SUBMERSIBLE ANTIPODES — The invasive lionfish that crowds coral reefs and preys on native fish in the Atlantic's shallower waters is such a problem that divers in Florida and the Caribbean are encouraged to capture and eat them whenever they can.

Lionfish, which have venomous spines, are a well-documented problem in Atlantic coral reefs, where the foot-long, one-pound invaders from the tropical parts of the Pacific and Indian oceans live without predators and eat other fish voraciously. What's slowly coming into view is how deep into the ocean their invasion has spread.

Researchers and wildlife officials worry that lionfish may undo conservation efforts aimed at rebuilding populations of native predators such as groupers and snappers. Lionfish gorge on the young of those species, as well as their prey.

"They can eat pretty much anything that fits

(Wilfredo Lee/ Associated Press) - In this Friday, June 28, 2013 photo, Oregon State University lionfish expert Stephanie Green counts lionfish on the sunken freighter "Bill Boyd," as she travels aboard the submersible "Antipodes," in about 250 feet under the sea about three miles off the coast of Fort Lauderdale, Fla. Seattle-based OceanGate Inc. offered scientists and wildlife officials a close-up look at the invasive lionfish deep in the waters off South Florida aboard the Antipodes. Dives in Florida and the Caribbean are

Green and other researchers who took the dives surfaced believing they had seen the frontier in their fight against lionfish. The next problem will be routinely making similar dives to study and perhaps capture lionfish.

They would seem to have a lot of water to cover — the deepest confirmed sighting of a lionfish was at 1,000 feet in the Bahamas.

"We are capable of doing a good job of controlling lionfish at diveable depths, in shallower areas. Divers and spearfishers can go in and remove the fish. But the lionfish are abundant in large numbers at these deeper habitats, and that's really where the next frontier of this battle is going to be, in those deep water areas," Green said.

inside their mouths," Oregon State University lionfish expert Stephanie Green said.

Divers are encouraged to capture and eat any lionfish they encounter to protect reefs and native marine life already burdened by pollution, over-fishing and the effects of climate change. And last month, the Florida Fish and Wildlife Conservation Commission waived the recreational license requirement for divers harvesting lionfish and excluded them from bag limits, allowing people to catch as many as they can.

But recreational divers max out around 130 feet deep, though. Researchers and wildlife officials rarely have the means to venture deeper than that, but they've realized the lionfish they can't see may be their biggest concern.

As Green discovered on a recent expedition aboard a submersible, there's little to disturb a lionfish living on a wreck 250 feet deep into the Atlantic. There are no predators and no divers.

"I did not expect it to be this loaded with lionfish," Green said. In less than half an hour, she tallied nearly three dozen lionfish in view across the stern of a steel freighter sunk in the 1980s as an artificial reef a few miles off South Florida. She could have continued counting, if the yellow submersible's draining battery had not required a trip back to the ocean's surface.

Last month, Seattle-based OceanGate Inc. offered scientists and wildlife officials a close-up look at deep-water lionfish in dives aboard the yellow submersible named Antipodes. In strong currents that might have tangled a tether connecting a remotely operated robot to a vessel at the surface, the Antipodes sank and rose as smoothly as an elevator. Maneuvered by a joystick, it crawled over the sand at a walking pace.
